

Appln No. 09/308,607

Amdt date July 8, 2003

Reply to Office action of April 8, 2003

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A process for producing porous spherically-shaped bio-ceramics comprising dropping a starting material for ceramics into a low temperature medium from a thin tube having an inner diameter ranging from about 0.3 to 2 mm, followed by freeze drying and then sintering the same, wherein the starting material is obtained by adding, to a calcium phosphate in the form of a powder having a size of not more than 100 μm , a 3 to 15% by weight aqueous solution of a binder in an amount of 2 to 4 times the weight of the powder.

2. (Previously Amended) A process for producing porous spherically-shaped bio-ceramics as claimed in claim 1, wherein the calcium phosphate is hydroxyapatite, tricalcium phosphate, calcium dihydrogenphosphate, tetracalcium phosphate, octacalcium phosphate, or a mixture thereof.

3. (Previously Amended) A sustained drug release product obtained by forming the porous spherical-shape bio-ceramics obtained according to claim 1 or 2, wherein the pores are impregnated with a drug.

4. (Previously Amended) A sustained drug release product as claimed in claim 3, wherein, after the drug is impregnated into the porous bio-ceramics, the impregnated parts are plugged by said bio-ceramics, whereby the sustained release time of the drug is controlled.

5. (Currently Amended) A process for producing porous spherically-shaped bio-ceramics comprising:

bringing a starting material for bio-ceramics into contact with a low temperature medium by dropping the starting material into the low temperature medium from a thin tube having an inner diameter ranging from about 0.3 to 2 mm, wherein the starting material is obtained by adding, to a calcium phosphate in the form of a powder having a size of not more than 100 μm , a 3 to 15% by weight aqueous solution of a binder in an amount of 2 to 4 times the weight of the powder, followed by freeze drying to form a freeze dried product and;

thereafter sintering the resultant freeze dried product.

6. (Previously cancelled)

7. (Previously cancelled)

8. (Previously cancelled)

9. (Previously cancelled)

10. (Previously cancelled)

11. (Previously Amended) A process for producing porous spherically-shaped bio-ceramics as claimed in claim 5, wherein the calcium phosphate is hydroxyapatite, tricalcium phosphate, calcium dihydrogenphosphate, tetracalcium phosphate, octacalcium phosphate, or a mixture thereof.

12. (Previously Amended) A process for producing a sustained drug release product comprising impregnating the pores of the porous spherical-shape bio-ceramics obtained according to claim 1 or 2 with a drug.

13. (Previously Amended) A process as claimed in claim 12, wherein, after the drug is impregnated into the porous bio-ceramics, the impregnated parts are plugged by said bio-ceramics, whereby the sustained release time of the drug is controlled.

14. (Previously Added) A process as claimed in claim 1, wherein the binder slurry is an aqueous solution of one or more of a water-soluble cellulose derivative, polyvinyl alcohol, polyacrylic acid, polyacrylamide, polyvinyl pyrrolidone, polyethylene glycol, and starch.

15. (Currently Amended) A process as claimed in claim 1, wherein the ~~[starting material is added dropwise to]~~ low temperature medium is liquid nitrogen ~~[from a thin tube having an inner diameter of 0.2 to 2 mm].~~

16. (New) A filler for regenerating body tissue comprising porous spherically-shaped bio-ceramics obtained by a process according to claim 1.

C1
concl'd
17. (New) A method for regenerating body tissue comprising introducing into areas where body regeration is desired porous spherically-shaped bio-ceramics obtained by a process according to claim 1.

18. (New) A process for producing porous spherically-shaped bio-ceramics as claimed in claim 1, wherein the porous spherically-shaped bio-ceramics each have a diameter ranging from about 0.01 to about 10 mm.
